

### **Luxembourg Stadium counts with Avatar Seating**

Luxembourg company 3S-Tech – specialized in sports equipment – has relied on our experience and on our stadium seats to carry out this project.

### **The new national football and rugby stadium, called “Stade de Luxembourg”, has 9400 Avatar seats.**

Insitual team has designed the stands with 9400 seats of the Avatar model, installed in a mosaic shape, with the colors of the country.

The stadium is built in accordance with current standards, specifically the FIFA / UEFA standards (stadium category 4) and World Rugby standards, and is therefore intended to host top-level official competitions.

Avatar Seating product range is characterized by its design (awarded by Red Dot Design in 2016), which combines ergonomics, comfort, aesthetics, and a monorail fixing system that allows quick assembly and flexibility to vary the distance between seats, either permanently or temporarily. So it also allows you to adapt the distance between seats to change distribution or seating capacity in the grandstands.

Another important advantage of this model of stadium seating is that it optimizes the space between rows, thanks to its small dimensions when it is folded, 20 cm. In addition to improve the spectators' comfort, it provides safety since it minimizes emergency evacuation times of spectators at the stands.

All the pieces that conform this seat are injection molded (100% recyclable), only the lower rail to the concrete is metallic.
