TURFROB®

Perfect greenkeeping thanks to SMART Technology.

GET STARTED

2 Still training under floodlights on Saturday night, yet another kickoff in the local derby on Sunday morning. The pitch: Perfectly maintained. The players marvel: Just how does our greenkeeper manage it?

One word: Turfrob. Time-consuming greenkeeping is a thing of the past. Your greenkeeping robot takes care of that. You operate Turfrob with an app and it navigates fully automatically. Simply choose a greenkeeping programme and Turfrob does its work without any supervision – it's fully independent even at night. With strong battery performance for many hours of brushing and grooming. Turfrob charges as fast as lightning in the morning and is ready for perfect greenkeeping immediately: You thus maximise playing time while guaranteeing a sustainable useful life of the artificial turf system at the same time. **Fully automatic care, perfect greenkeeping: Turfrob.**

TURFROB®

TURFROB®

Discover the advantages.

EASY TO USE

4 Robots help us in many areas of life, make our society more advanced and are simply sensible assistants. It is not just in industry that automation is continuing to make progress. Robots raise the quality of your everyday life to a new level. This leads to greenkeeping of artificial turf, where Turfrob takes part.

No matter whether it's a hobby or competitive sport: Only artificial turf in perfect condition makes major sports and its associated emotions possible. Turfrob enables you to achieve a perfect maintenance of your pitch. Our goal is to reach continuous and consistent playing characteristics in all areas of the playing field. **365 days a year durability and outstanding performance are guaranteed.**

EFFECTIVENESS

Full of energy:
Professional power
included!

The Turfrob has all the features for perfect greenkeeping: grooming and brushing with constant accuracy. The key to the artificial turf system's outstanding quality and sustainable playing characteristics.

ECONOMY

Optimal care,
longer lifetime.

Superior drive and battery technology guarantee environmentally friendly maintenance of the field. The field gets its required dose consistently during operation, depending on the playing intensity and system design. Maintenance has never been better.

TECHNOLOGY

High-tech for
a quick start:

Professional engineering has resulted in a unique greenkeeping device for artificial turf systems. New standards in technology make it easier to operate and very convenient to use. Thanks to perfect engineering, a professional service device has come to life.

EFFICIENCY

Everything is automatic
and controlled via
smartphone.

The Turfrob makes it possible. These new features support perfect greenkeeping and your peace of mind. Easy to program, ready to go! Turfrob knows its job and does it perfectly.

TURFROB

Greenkeeping of artificial turf in perfection.

Control

Easy operation and control of the Turfrob

Greenkeeping was never easier. Just start the app, set the program according to type and greenkeeping intensity and get started. The app connects to the Turfrob and starts the greenkeeping process fully automatically.

Brushing

Brushing and straightening of artificial grass

Football boots put very high mechanical stress on artificial turf fibres. Especially in the penalty areas of the pitch. Constantly brushing protects fibres from folding, which increases the lifetime of the artificial turf system.

GPS

- Accuracy of ≤ 2 cm

Base station

- Builds up Turf-WIFI
- Connected to internet
- Communicates with Turfrob

Charging unit

- 220 V / 240 V Connector
- Fast charging of the Turfrob

Turfrob

- Connected to Turf-WIFI
- Controlled via the Turfrob app
- Anti-theft protection

App

- Application to control the Turfrob
- Available for iOS and Android
- Connected to the Turf-WIFI
- Regular updates via internet

Grooming

Grooming and loosening infill

Depending on playing intensity, the infill becomes compressed and must be loosened regularly. The Turfrob grooms the ground synced with the system structure and guarantees looseness and thereby consistent playing characteristics. Combined with the brushing feature the infill granules are distributed evenly.
